

## **McLaren Software Releases DocLoader for EMC - Documentum 6.5**

*Bulk and batch loading for EMC – Documentum 6.5, 6.0 and 5.3.users*

### **EMC World Orlando Florida 18<sup>th</sup> May 2009**

DocLoader is accredited under the Designed for EMC program and is one of the most popular bulk and batch loading tools available with over 1,000 licenses sold to date.

DocLoader enables the rapid and controlled bulk and batch loading of documents, including CAD Drawings, from legacy and external sources into an EMC Documentum repository. Imports are set up via easy to follow wizards and is fully integrated with Microsoft Excel 2003 or 2007 for data manipulation and the definition of business rules. These business rules can be shared by all other DocLoader users to ensure consistency and compliance with company standards. This includes automatic population and validation of attribute data during the import process and the generation of audit trails to provide a comprehensive import history.

DocLoader can be extended using Post Processing functions enabling users to manipulate and interact with imported content including; the creation of virtual documents, attaching documents to a Documentum lifecycle and launching a workflow, sending the document to a user, manipulating document attribute data and the automatic execute of DQL Queries. This Post Processing capability together with the configurable data validation rules ensure that only the right data and content get into your controlled Documentum Repository.

Newly released DocLoader Project enables up to 65,000 documents to be migrated in a single load. DocLoader Personal designed for smaller batches shares the same configuration sheets to enable the import of up to 50 documents in a single batch.

For more information, on-line demo and evaluation copies please visit <http://www.mclarensoftware.com/ms/products/Docloader>.

## **About McLaren Software - The Asset Documentation Integrity company**

McLaren Software develops enterprise scale engineering documentation and business process applications. Enterprise Engineer leverages enterprise content management (ECM) and collaboration technologies from EMC, IBM, Microsoft and Autodesk.

Enterprise Engineer is designed for companies in asset intensive markets, including oil & gas, energy & utilities, life sciences, transportation, natural resources, process manufacturing and healthcare or any organization dependent on large operational assets for revenue generation or service provision.

McLaren's Enterprise Engineer application suite helps ensure the integrity of documentation and business processes associated with operational assets and engineering projects. Enterprise Engineer is proven to reduce costs, lower the risk of non-compliance, improve efficiency and accelerate project execution.

Headquartered Glasgow Scotland and Houston Texas McLaren has offices in Dusseldorf Germany and partners in North America, Europe, Middle East, South Africa, South East Asia and Australia.
